

## THE GLASS RESPONDS TO THE EXTERNAL ENVIRONMENT SO A BUILDING'S OCCUPANTS DON'T HAVE TO.

Viracon PLUS Smart Glass powered by Halio is the most advanced tinting glass available. It looks just like your typical façade glass. But with this glass you can control the tint to reduce solar heat gain and glare.

### **Best aesthetics from clear through full tint.**

Tints through a full spectrum of neutral gray options to block solar heat and glare. No more of the blues or yellows featured in legacy smart glass products.

### **Fastest-tinting electrochromic glass.**

Full tint change in less than 3 Minutes; 10 times faster than legacy smart glass options.

### **Most uniform tinting through transition.**

No more splotchy, halo or wavy effects.

### **Windows in-sync with technology.**

Tinting can be fully automated or manually controlled with a mobile app, desktop app, wall-mounted tint selectors, and voice assistants.

### **Better for you, better for occupants, better for the environment.**

With Viracon PLUS Smart Glass buildings are more energy efficient and healthier for occupants and the environment.

## GREAT BUILDINGS DESERVE GREAT GLASS
